

Our Advanced Ancestry Timeline fully analyzes your entire DNA sequence to determine not only your ancestral history, but its complete timeline as well.

The further back we examine, the more centralized we find our ancestral lines to be. The unlikeliness of cultural crossbreeding was large in part due to pre-evolved geological landscapes and obstacles, environmental obstacles such as Ice Ages and Glacial Periods, and technological obstacles such as the overall inability to travel.

When we do find peculiarities among your ancestry, these rarities tend to be more interesting when represented among ancient versus recent civilizations. These peculiarities offer us a measurable timeline by which we can identify when and where odd mixtures and statistically outlier types of populations entered your family history.

Though many of these ancestries may seem wildly foreign to you, know that our team only denotes ancestries we believe you share at an 80% confidence level or better to be featured on your timeline. This feature may help you learn more about your genealogy, as you can piece together the migrations that lead to the results in your Advanced Ancestry Report.

We identified one of your ancestor(s) was **N.W. European** and lived around the year **1600 A.D.** As we analyzed your DNA, we found that at location **7286404 of Chromosome 9** there was a segment of **2298 SNPs** that matched the people group CEU. Statistically we determined this to be **80% accurate.**
